

DueWork partners with louisviver.network for further network expansion — including DNS secondary zones, cloud, mail and peering

PARIS, FRANCE — DueWork provides an array of services with at its core, the goal to simplify the work of the DueWork’s Family members through guidance and expertise, thanks to their common parent brand growing power. Creating a stable infrastructure to support this family comes at a cost in terms of servers, IPs, domains and more.

That’s why we are happy to announce a strategic partnership with louisvivier.network (louisvivier.network) and its creator. The structure has been developed in co-operation with DueWork and has let the creator to agree to allow DueWork to graciously use some of the allocated ressources.

The resources will be used as a fallback node in the DueWork homemade network with DNS secondary zones and cloud for redundancy, mail and off-site backups. This node also make the the DueWork network more open to the world through the hosting provider own peering contracts.

About DueWork:

DueWork powers dozens of websites through expertise, guidance and services and helps each member focus on what matters the most: their activity.

About louisvivier.network:

(FR) LouisVivier.network est un réseau né d'un besoin de créer une infrastructure pour l'épanouissement des projets de son créateur et de ceux de ses collaborateurs.

Terms of the partnership forbids money exchanges to and from both parties.
DueWork remains 100% committed to customers’ data safety and has taken actions in order to protect it from third party attacks on louisvivier.network dedicated instance.
Industry standard encryption is and will be used most of the time for storing backups on this fallback server in order to protect sensible data.
DueWork can't be taken for responsible in the case of service downtime, network protection or other incidents happening via louisvivier.network.
For more informations about how we handle this node, please contact a DueWork representative.
